

[↑ up one directory level](#)

Current Directory: **osx/intel**

Pick (if available) your choice of Sage distribution:

- `*-app.dmg` - to get Sage as a Mac OS X application that starts like most other Mac applications
- `*.dmg` - to get the full Sage distribution for traditional Unix command-line like use

Both allow full use of the Sage Notebook and the command line.

On OS X version 10.11 (El Capitan), you need at least sage-6.10. It does not work with older versions of SageMath.
